

Conclusion

- **Interactions in the environment of the “Story Mode” need to be visually communicated to the player.**
 - Prioritize visual communication first to the player by implementing elements/decorations that stand out or draw the attention of the player.
 - Meaning, create objects or “things” that draw the attention of the player first.
 - Then use VFX where interactable objects or entities create a “pulse” effect around them.
 - If using VFX is too distracting for the player & breaks immersion, use UI elements (such as [“Return to Monkey Island” circles](#)) to indicate what’s interactable & what isn’t interactable.
 - Also use SFX as a supportive element to indicate when a player has interacted with an object.
- **Be consistent with how the environment is interacted with across different platforms (in this case, across Desktop & Mobile).**
 - “The less you have to click, the better”.
 - What are the “physical” interactions (moving your finger or mouse) in the environment?
 - Make those interactions as easy as possible to perform.
 - “Return to Monkey Island” is an excellent example of implementing attention drawing decoration of the environment that both stands out in the environment but also makes perfect sense for the setting & atmosphere the game is going for.
 - [Return to Monkey Island Steam page](#).
- **This is speculation but making every scene in Story Mode a 2D based environment would work but would most likely require a lot of production from Artists side.**
 - This is something that needs to be consulted with an Artist if the 2D approach is feasible or not.
- **You could create an environment out of 3D where you can decorate it in the way that’s needed for the game’s narrative & you could potentially move things around as needed.**
 - Potentially, you could add camera angles as needed to highlight different aspects of the environment where you want to guide the eyes of the player.
 - If the 3D approach to constructing the environment is considered, go for a “Low poly / High texture” approach.
 - [“Return of the Obra Dinn”](#) could also serve as an excellent inspiration for creating a 3D based environment.
